PFG Orca

[Rif.: #009-01]

The Beach Cleaner works mechanically by taking the movement directly from the tractor's power take-off, to which it is connected with the three-point linkage of the lift, which also adjusts the working depth from 0 to 15 cm for a width of 160 cm.

The load of sand and debris is carried out through a series of nylon spatulas, with a movement transmitted by chains, which load the sand into a first frame of the machine with a width of the machine and a height of 60 cm. acting as a sieve. Here sand and debris are conveyed upwards in order to be unloaded in a sieve, like the previous one, with a transversal movement where the debris will quickly reach the rear drawer.

The machine also adapts perfectly to the work to be carried out on the shoreline. Machine applicable to a 50 - 60 HP tractor.

These are the technical characteristics declared by the manufacturer:

- Dimensions 190 * 153 * 140h
- Weight: 520 Kg
- Working width: 160 cm
- Working depth: from 0 to 15 cm
- Work capacity: about 15,000 square meters / h.
